SUMMARY

Senior backend engineer (8+ years) who owns platform-level reliability, not just features. At Acme Corp, owned the payments ledger service end-to-end and rebuilt both its reconciliation pipeline and its on-call alerting — exactly the "shared services other teams build on" scope this platform role is describing.

WORK EXPERIENCE

Acme Corp

Mar 2021 - Present

Senior Backend Engineer

Remote

- Owned the **payments ledger service** end-to-end — schema design, migration tooling, and the reconciliation job that catches drift against the upstream processor.
- Led the move from a monolithic **cron-based batch job** to an event-driven pipeline, cutting end-of-day reconciliation time from 4 hours to 20 minutes.
- Redesigned the on-call alerting system, cutting weekly page volume by ~70% by tightening thresholds and removing redundant checks.
- Mentored two junior engineers through pair programming and PR review.

Beta Systems

Jun 2018 - Feb 2021

Software Engineer

Anytown, US

- Built and maintained the internal admin dashboard used by support staff.
- Reduced API p95 latency by 40% by adding targeted caching to the three hottest endpoints.

SKILLS

Languages - TypeScript · Python · Go

Frameworks - Node.js · Express · FastAPI

Infra - AWS · Docker · Terraform

Testing - Jest · Pytest

INDIVIDUAL PROJECTS & BLOGS

- Example OSS Tool** — a small CLI utility. github.com/janedoe/example-tool
- Blog: [How I debugged a production incident](#)

EDUCATION

B.Sc. in Computer Science

Sep 2014 - Jun 2018

Example State University

LANGUAGES & INTERESTS

- Interests** - Rock climbing, chess, reading sci-fi
